Backend Developer with experience building scalable web and mobile applications, RESTful APIs, and database-driven systems. Experienced in serverless architectures using TypeScript and Node.js, applying clean architecture principles in enterprise environments. Strong background in API design, cloud-based microservices, and collaboration with frontend clients.

PROFESSIONAL EXPERIENCE

Backend developer – Atom – August 2025 - present

- Developed and maintained backend services using TypeScript and Node.js within a serverless architecture deployed on AWS using Serverless Framework.
- Built and maintained RESTful APIs consumed by internal and external platforms, following clean architecture principles (handlers, use cases, DTOs, services, repositories).
- Designed and implemented event-driven workflows using Amazon SQS to process asynchronous business operations.
- Configured infrastructure as code using serverless.yml, defining HTTP events, environment variables, IAM permissions, layers, and multi-stage deployments.
- Implemented robust validation, structured logging, and centralized error handling using shared utility layers.
- Worked with relational databases through shared data layers, implementing pagination, filtering, reporting logic, and optimized queries.
- Collaborated in Git-based workflows, handling feature branches, rebases, hotfixes, and production-ready deployments.
- Technologies: TypeScript, Node.js, Serverless Framework, AWS Lambda, API Gateway, Amazon SQS, MySQL, Git

Product & UI/UX Designer — Tzuku (Paid Project) 2025

- Led the end-to-end design of a mobile application focused on pet monitoring and activity tracking.
- Designed user flows, navigation structure, and screen layouts with a strong focus on usability and product consistency.
- Created high-fidelity UI designs and interactive prototypes, ensuring a cohesive visual system across the app.
- Collaborated closely with stakeholders to translate product ideas into clear, functional application designs.
- Defined visual guidelines and design components to support future development and scalability.

Full-Stack Developer — Mobile Fitness Application – April- September 2025

- Developed a mobile fitness application with personalized AI-generated workout routines and progress tracking features.
- Built a RESTful API with Node.js, Express, and MySQL using a clean layered architecture (controllers, services, models).
- Designed and implemented a relational database schema with multiple entities (users, routines, exercises, progress, photos, injuries, measurements).
- Created a dynamic and interactive frontend using React Native (Expo), including animations and responsive UI/UX.
- Integrated authentication, persistent storage using AsyncStorage, and API communication with Axios.
- Implemented advanced features such as workout session timers, automatic routine generation, body measurements tracking, and photo progress galleries.

Early Projects – February – December 2023

Full-Stack Foundations

- Built foundational full-stack applications using JavaScript, Node.js, Express, and SQL/NoSQL databases.
- Developed CRUD-based REST APIs and responsive UIs with HTML, CSS, and React.
- Gained hands-on experience with API consumption, Git workflows, and client-server architecture.

EDUCATION

Instituto Tecnológico de Tepic

Bachelor's Degree in Computer Systems Engineering

Tepic, Nay.

August 2020 - 2025

- Relevant coursework: Software Engineering, Web Development, Databases.

ADDITIONAL SKILLS

- **Soft Skills:** Teamwork, communication, problem-solving, adaptability.
- **Languages:** Spanish (Native), English (Advanced B2).
- **Links:** Briefcase (<https://jorge-briefcase.netlify.app/>) GitHub (<https://github.com/JorgeGitHub>).
