PROFESSIONAL SUMMARY

Software Engineer with 1.5 years of hands-on experience building backend services, REST APIs, asynchronous workflows, and full-stack applications using TypeScript, Node.js, AWS, and MySQL. Experienced with payment integrations, webhooks, serverless systems, SQL/NoSQL databases, testing, debugging, and production reliability. Additional project experience with React Native, Java/JDBC, product collaboration, and API validation tests. Focused on clean, maintainable software, thoughtful API design, continuous learning, and collaborative delivery.

TECHNICAL SKILLS

Languages - TypeScript | JavaScript | SQL | Java | Python (familiar) | HTML/CSS

Backend And APIs - Node.js | Express | REST APIs | Webhooks | Asynchronous workflows | Serverless architecture | JDBC

Cloud And Databases - AWS Lambda | API Gateway | Amazon SQS | CloudWatch | MySQL | DynamoDB | MongoDB

Frontend And Practices - React Native (Expo) | Git/GitHub | CI/CD | Unit/integration testing | Debugging | Logging | Documentation

PROFESSIONAL EXPERIENCE

Aug 2025 - May 2026 | Backend Developer | Atom

- Built and maintained serverless backend services with TypeScript, Node.js, AWS Lambda, API Gateway, Amazon SQS, and Serverless Framework.
- Designed REST APIs and asynchronous workflows supporting payment processing, webhooks, integrations, and background operations.
- Improved production reliability through structured validation, centralized error handling, standardized logging, retry logic, and idempotent processing.
- Wrote unit and integration tests for critical API endpoints and Lambda handlers, helping prevent regressions across staging and production.
- Optimized MySQL queries and reporting features involving filtering, pagination, and multi-table data processing.

SELECTED PROJECTS

Apr 2025 - Sep 2025 | Full-Stack Developer | Mobile Fitness Application - Personal Project

- Built a full-stack mobile application with personalized AI-generated workout routines, timers, authentication, and progress tracking.
- Developed a REST API with Node.js, Express, and MySQL using layered architecture and an eight-entity relational schema.
- Created the React Native frontend and integrated AsyncStorage, Axios, authentication flows, and service/API validation tests.

2025 | Product & UI/UX Designer | Tzuku - Paid Project

- Delivered 20+ high-fidelity screens and interactive prototypes for a monitoring and activity-tracking mobile application.
- Collaborated with stakeholders and developers to define user flows, API endpoint specifications, and data models.

Mar 2023 - Jun 2023 | Java Developer | PicaFresa POS and Inventory System - Academic Project

- Built a Java Swing desktop system covering role-based access, products, providers, inventory, invoices, sales, returns, tickets, and cash closing.
- Designed a MySQL relational database and used JDBC to implement CRUD screens, inventory updates, sales workflows, and reporting.

EDUCATION

Aug 2020 - 2025 | Bachelor's Degree in Computer Systems Engineering | Instituto Tecnologico de Tepic

Weighted GPA: 90.75/100 | Coursework: Software Engineering, Web Development, Databases, Object-Oriented Programming.

ADDITIONAL INFORMATION

Spanish: Native | English: Advanced B2

Soft skills: collaborative delivery, stakeholder communication, ownership, attention to detail, continuous learning.

Interests: cloud architecture, distributed systems, observability, AI-enabled products.
